

Four stores. One checklist.

Four Shopify stores read from public pages and feeds — 397 products, 20 Fairhaven product pages in full, no logins. Fairhaven's technical baseline is the strongest I have measured this year; the six findings are the operating gaps a weekly QA sheet catches.

95.2/100

Grade A · Benchmark · would rank 1 of 21 on the ShelfMark Michigan index (avg 75.9)

Findability		100%
Catalog		100%
Buy		100%
Trust		90%
Content		67%

29 public-page checks, same rubric as mousabatarseh.com/shelfmark

WHAT WORKS

- **A clean technical-SEO baseline on Fairhaven.** robots.txt ends with the sitemap line; every one of 20 sampled product pages has a self-referencing canonical, a unique title, a unique description and Product + Offer JSON-LD with sku and gtin12; 17 of 20 also carry FAQPage schema.
- **Real, metafield-driven discovery.** Collection filters run on custom metafields — gender, life stage, health benefit, key ingredients, made without, product form, FSA/HSA eligibility — with nine sort options, and site search returns a proper results page with the same filters. Bariatric Fusion and Vital Nutrients use the same approach.
- **One PDP template, and prices that agree everywhere.** All 20 sampled Fairhaven PDPs share one template (benefits, ingredients, use, description, FAQ, bought-together) with Stamped reviews and Recharge subscribe-and-save. Card price = PDP price = feed price on 20 of 20 Fairhaven, 40 of 40 Bariatric Fusion and 16 of 16 Vital Nutrients products checked; the 89 SKUs shared by bariatricfusion.com and unjury.com show 0 price and 0 stock mismatches.

WORKING FIXES ON THE PAGE

- Collection health monitor
- Sold-out to the bottom
- Promo consistency check
- Facts panel as a table
- Title fitter
- The one-page portfolio standard

FIRST 30 DAYS

- Ship the weekly QA workbook (collection health, sold-out placement, promo consistency, title length, schema presence) and run it on all four stores
- Fix the six footer/sitemap collections and the All Products sort on Fairhaven
- Correct the five promo badges so price, JSON-LD and subscription price agree

SIX FINDINGS, WITH COUNTS

Footer “Shop” links and the sitemap point at empty collections

3 of 8 footer collection links · 4 of 42 sitemap collections · 32 products vs 42 collections

A sold-out product is the #2 item on All Products and in the search drawer sitewide

position 2 of 32 on /collections/all · position 2 of 3 in “Trending Now” on 32 of 32 captured pages

“30% OFF – select sizes” badges on single-variant products while every price still shows full

5 of 32 products badged · 5 of 5 single-variant · 0 of 5 show a reduced price · 0 of 32 use compare-at pricing

Supplement Facts live only in JPGs; product_type and tags are unusable for merchandising

facts panel image-only on 17 of 20 PDPs · Ingredients accordion ≤19 words on 15 of 20 · product_type blank on 32 of 32 · 32 tags on 32 products

Every sampled PDP title truncates in search; no rating or breadcrumb schema; no H1 on the homepage

20 of 20 titles at 73-91 characters · 13 of 20 descriptions end “Learn more...” · 0 of 20 with aggregateRating · 0 of 20 with BreadcrumbList · 20 of 20 og:image over http

Four stores, four conventions: policies, shipping promises and shared-SKU names diverge

4 themes · 4 policy-URL patterns · 3 free-shipping thresholds (\$35 / \$49 / \$100) from one warehouse · 28 of 89 shared SKUs titled differently · 1 live “copy-of-” handle + 5 “-1” handles · 7 empty descriptions on Vital Nutrients
