

THE PARTS ARE HERE. THE FIELDS AREN'T.

federalfp.com read from public pages: three of nine sitemap files (54,496 URLs), five category pages, 19 product pages and eight content pages, plus the sister store — no logins, no carts, no quote requests. Search by part number works; the catalog shows the marks of a bulk ERP import nobody has mapped yet.

WHAT WORKS

- **Part-number search works.** Searching FI-TE-04LLMK-W3-MS returns exactly one hit with price and Add to Cart, and the results page is noindex with a canonical to the search root — the right handling for buyers who type manufacturer codes.
- **Structured data most distributors never ship.** Every sampled product page carries Product + Offer with price, currency and availability, shippingDetails (2–5 business days, \$9.99, US), a merchant return policy and a BreadcrumbList; category pages add an OfferCatalog. 19 of 19.
- **The Engineering Toolbox is real content.** /engineering-toolbox/ is a 2,570-word in-browser calculator suite — cylinder force, speed and flow, rod buckling, pumps, HPUs, pneumatics, conversions — with Shop Cylinders links back into the catalog, alongside a hose configurator and a product configurator.

WORKING FIXES ON THE PAGE

- URL-key generator
- Attribute parser
- Option normalizer
- Stock and price, in agreement
- Meta template preview
- Store-view footer

FIRST 30 DAYS

- URL keys generated and imported for the 20,242 keyless products; sitemap regenerated
- Store-view footer and header blocks; Shipping and Returns pages; test pages removed
- Product meta templates live; homepage relinked to canonical categories

SIX FINDINGS, WITH COUNTS

37% of sitemap product URLs have no URL key and are blocked by robots.txt

20,242 of 54,496 URLs (37.1%) across the three sitemap files fetched · 3 of 3 sampled pages return 200 with a robots-blocked canonical

Specs live inside the title string; where attributes exist the values are dirty

18 of 19 PDPs with only Name / SKU / Weight / Brand · 0 of 19 with a thread, port, material or pressure attribute · Cylinders: 6 of 17 Bore values are inch-mark twins, 72 of 142 Bore×Stroke values are x/X twins, 2 values are Excel date serials

Price and availability contradict each other — the public symptoms of an unmapped ERP sync

9 of 19 PDPs are Request-Pricing-only, and 8 of those 9 declare InStock in schema · 1 of 19 prints \$0.00 · Chairs & Creepers page 1: 20 of 20 unpriced · a \$40,000–\$50,000 price bucket on couplings

Manufacturer logos stand in for product photos on tens of thousands of SKUs

10 of 19 sampled PDPs show a supplier logo as the only image · sitemap-wide, 35,744 of 51,918 products (69%) share a generic first image · 512 have no image at all

One meta description sitewide, code-only titles, and three URL layers for the same part

19 of 19 PDPs + 7 of 7 content pages share one description · 11 of 19 titles are the bare part code · 12 of 17 sitemap product URLs return 200 with a different canonical · 2,368 of 2,515 category URLs (94%) end in -1/-2/-3 · 58 homepage links into an alias category tree

Federal's pages carry Patriot Hydraulics' copyright and phone number; policy links go to the wrong pages

2 wrong-brand strings on every page · Shipping and Return Policy both link to /terms/ · 2 “#” footer links · 6 test/junk pages in the sitemap · the same typo on 19 of 19 PDPs · 2 of 2 SKUs duplicated across both domains
